Three supply indicators: per 10,000 residents | per km² | per 100 km roads
Three services | 5/10/15 min thresholds | 1-40 additions
Existing provision
89 facilities + pedestrian network
Supply-based rule
Lowest-supply subdistrict
Network-greedy reference
Best available candidate
Sequential update
Recalculate after each addition
Planning objectives
District-wide | equal-subdistrict
Decision validity
Shortfall | scale | robustness
